

Part Number: GE-SFUL**Description: GROVE Gang White Faceplate**

The GROVE Gang White Faceplate is a versatile and essential component for organizing and concealing network connectivity in various environments. This single-gang faceplate provides a clean and professional solution for mounting and organizing network connectors, creating a tidy appearance for your networking infrastructure.

Key Features:

- **Different Gang Design:** Multiple gang faceplate, accommodating multiple gang electrical box for convenient installation.
- **White Finish:** The white finish provides a clean and neutral appearance, suitable for blending into various environments, including offices, homes, and data centers.
- **Versatile Connectivity:** Configured to support various network connectors, such as keystone jacks, network modules, or other compatible components.
- **Durable Construction:** Constructed with durable materials, the faceplate ensures longevity and withstands regular wear and tear.
- **Professional Appearance:** Enhances the overall appearance of your network setup, contributing to a neat and organized environment.
- **Easy Installation:** The single-gang faceplate is designed for easy installation on standard electrical boxes, streamlining the setup process.
- **Customizable Configuration:** Users can customize the faceplate configuration based on their specific networking requirements, providing flexibility for different applications.
- **Compatibility:** Designed to be compatible with GROVE networking products and infrastructure, ensuring seamless integration for a uniform and cohesive networking solution.

Upgrade your networking infrastructure with the GROVE Gang White Faceplate, where simplicity, versatility, and professional aesthetics combine to optimize the appearance and functionality of your network setup.
